-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

1. Claims 1-2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, line 4 replace "the surface" with --a surface--.

In claim 1, line 8 replace "the original disposition" with --an original disposition--.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Robotham et al.

Robotham et al discloses in figures 1-8 a safety lock structure for an instrument switch including switch body 36; switch knob 20; a safety knob 56 installed at the switch knob for sliding along the surface of the switch knob; a safety lock bar (60,64) integrally formed at the safety knob for sliding with the safety knob; a spring 68 for restoring the safety lock bar to an original disposition; and a locking rod formed by sidewall 72 for locking the safety lock bar for preventing the switch knob from being pressed when the safety knob is not manipulated. The locking rod forms a locking sill 80 with a locking groove 78 fixing the safety lock bar by

insertion for preventing the switch knob from being pressed when the switch body is in an activated state. As for the spring not being a plate spring, this is a matter of engineering design choice not affecting the operation, function or purpose in which the type of spring would not alter the purpose of the spring in restoring the safety lock bar to an original position and the type would be based on the desires of the manufacturer, as well as, the types available to the manufacturer.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Howard et al and Ochiai teach safety lock structures for instrument switches having a sliding safety knob installed relative to the switch knob for prevention of operation of the switch knob.
